2024 ANNUAL REPORT

TRUE.
BLUE.
TRANSITION.

Regarding useful lives for vessels in operation, they are usually aligned with the lease period. Useful lives and methods of depreciation are reviewed at least annually and adjusted if needed.

The assets' residual values are reviewed and adjusted, if appropriate, at each statement of financial position date. An asset's carrying amount is written down immediately to its recoverable amount if the asset's carrying amount is higher than its estimated recoverable amount.

Gains and losses arising on disposals or retirement of assets are determined by comparing any sales proceeds and the carrying amount of the asset. These are reflected in the income statement in the period that the asset is disposed of or retired.

Right-of-use assets, related to the Company's lease contracts in which the Company is a lessee, are included in Property, plant and equipment. Right-of-use assets and corresponding liabilities are recognized when the leased asset is available for use by the Company. Right-of-use assets are measured at cost, comprising the following:
- The amount of the initial measurement of the lease liability;
- Any lease payments made at or before the commencement date;
- Any initial direct costs; and
- Restoration costs.

The right-of-use asset is depreciated over the shorter of the asset's useful life and the lease term, on a straight-line basis.

Payments associated with short-term leases and leases of low-value assets are recognized, on a straight-line basis, as an expense in profit or loss. Short-term leases are leases with a lease term of 12 months or less.

(h) Intangible assets
Intangible assets, acquired separately, are measured on initial recognition at cost. Following initial recognition, intangible assets are carried at cost, less any accumulated amortization and accumulated impairment losses.

Software is recognized at historical cost and is amortized, on a straight-line basis, over its useful life. The useful life of software is generally between 3 and 5 years, dependent on the type of software.

Research costs are expensed when incurred. In compliance with IAS 38, development costs are capitalized if all the following criteria are met:
- The projects are clearly defined.
- The Company is able to reliably measure expenditures incurred by each project during its development.
- The Company is able to demonstrate the technical feasibility of the project.
- The Company has the financial and technical resources available to achieve the project.
- The Company can demonstrate its intention to complete, to use or to commercialize products resulting from the project.
- The Company is able to demonstrate the existence of a market for the output of the intangible asset, or, if it is used internally, the usefulness of the intangible asset.

When capitalized, development costs are carried at cost, less any accumulated amortization and impairment losses. Amortization begins when the project is complete and available for use. It is amortized over the period of expected future benefit, which is generally between 3 and 5 years.

(i) Inventories
Inventories are valued at the lower of cost and net realizable value. Cost is determined using the first-in first-out method. Net realizable value is the estimated selling price in the ordinary course of business, less the estimated cost of completion and selling expenses. Inventories comprise semi-finished, finished products and the Company's Fast4Ward® Multi Purpose Floater ('MPF') valued at cost, including attributable overheads and third-party financial costs during construction and spare parts stated at the lower of purchase price or market value. MPFs under construction are accounted for as inventories until they are allocated to awarded projects and then reclassified from inventories to contract assets.

(j) Trade and other receivables
Trade receivables are amounts due from customers for goods sold or services performed in the ordinary course of business. They are generally due for settlement within a maximum of 90 days and are therefore all classified as current. Trade

receivables are recognized initially at fair value. The Company holds the trade receivables with the objective to collect the contractual cash flows and therefore measures them subsequently at amortized cost, using the effective interest method. The Company applies the simplified approach in measuring expected credit losses for trade receivables.

Other receivables are recognized initially at fair value and subsequently measured at amortized cost, using the effective interest rate method. Interest income, together with gains and losses when the receivables are derecognized or impaired, is recognized in the income statement.

(k) Impairment of finance lease receivables

For finance lease receivables, the Company assumes that the credit risk has not increased significantly since the initial recognition if the finance lease receivable is determined to have a low credit risk at the reporting date (i.e. the Company applies the low credit risk simplification). As a result, if the finance lease receivable is determined to have a low credit risk at the reporting date, the Company recognizes a 12-month expected credit-loss.

(l) Cash and cash equivalents

Cash and cash equivalents consist of cash in bank and in hand fulfilling the following criteria: a maturity of usually less than three months, highly liquid, a fixed exchange value and an extremely low risk of loss of value.

(m) Share capital

Ordinary shares and protective preference shares are classified as equity. Incremental costs directly attributable to the issue of new shares are shown in equity as a deduction, net of tax, from the proceeds.

(n) Income tax

The tax expense for the period comprises current and deferred tax. Tax is recognized in the income statement, except to the extent that it relates to items recognized in other comprehensive income or directly in equity. In this case, the associated tax is also recognized in other comprehensive income or directly in equity.

Income tax expenses comprise corporate income tax due in countries of incorporation of the Company's main subsidiaries and levied on actual profits. Income tax expenses also include the corporate income taxes which are levied on a deemed profit basis and revenue basis (withholding taxes in the scope of IAS 12). This presentation adequately reflects the Company's global tax burden.

(o) Deferred tax

Deferred tax is recognized using the liability method, on temporary differences arising between the tax bases of assets and liabilities and their carrying amounts in the financial statements. Deferred tax is determined using tax rates and laws that have been enacted or substantially enacted by the statement of financial position date and are expected to apply when the related deferred tax asset is realized or the deferred tax liability is settled.

Deferred tax assets are recognized only to the extent that it is probable that future taxable profit will be available against which the temporary differences can be utilized. Deferred tax is provided for on temporary differences arising on investments in subsidiaries and associates, except where the timing of the reversal of the temporary difference is controlled by the Company and it is probable that the temporary difference will not reverse in the foreseeable future.

(p) Employee benefits

Pension obligations: the Company operates various pension schemes that are generally funded through payments determined by periodic actuarial calculations to insurance companies or are defined as multi-employer plans. The Company has both defined benefit and defined contribution plans:

- A defined benefit plan is a pension plan that defines the amount of pension benefit that an employee will receive on retirement, usually dependent on one or more factors such as age, years of service and compensation.
- A defined contribution plan is a pension plan under which the Company pays fixed contributions to public or private pension insurance plans on a mandatory, contractual or voluntary basis. The Company has no legal or constructive obligation to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods. The contributions to defined contribution plans and multi-employer plans are recognized as an expense in the income statement as incurred.
