

2025 ANNUAL REPORT

SBM OFFSHORE

TRUE.
BLUE.
TRANSITION.

When the receivable is recognized, it is limited to the amount of the corresponding demobilization obligation. These receivables are subject to expected credit-loss impairment, which are analyzed together with the finance lease receivable using the same methodology.

For finance leases, demobilization obligations are analyzed as a component of the sale recognized under IFRS 15. It is determined whether the demobilization obligation should be defined as a separate performance obligation. In that case, because the demobilization operation is performed at a later stage, the related revenue is deferred until the demobilization operations occur. Subsequent updates of the measurement of the demobilization costs are recognized immediately through the contract liability, for the present value of the change.

C. OTHER MATERIAL ACCOUNTING POLICIES

The consolidated financial statements of the Company have been prepared on the historical cost basis, except for the revaluation of certain financial instruments.

(a) Distinction between current and non-current assets and liabilities

The Company classifies its assets as current when it expects to realize the asset, or intends to sell or consume it, in its normal operating cycle. Inventory and contract balances are classified as current while the time when these assets are sold or consumed might be longer than 12 months. In the context of the Company's operations, it is considered that its operating cycle begins with the construction of the vessels, up to the moment of sale or transfer to finance lease receivable and the remaining Turnkey warranty period. Financial assets are classified as current when they are realized within 12 months. Liabilities are classified as current when they are expected to be settled within less than 12 months and the Company does not have an unconditional right to defer settlement of the liability for at least 12 months after the reporting period or when they are expected to be settled in the Company's normal operating cycle. All other assets and liabilities are classified as non-current.

(b) Consolidation

The Company's consolidated financial statements include the financial statements of all controlled subsidiaries.

In determining, under IFRS 10, whether the Company controls an investee, the Company assesses whether it has (i) power over the investee, (ii) exposure or rights to variable returns from its involvement, and (iii) the ability to use power over investees to affect the amount of return. To determine whether the Company has power over the investee, multiple contractual elements are analyzed, among which (i) voting rights of the Company at the General Meeting, (ii) voting rights of the Company at Board level and (iii) the power of the Company to appoint, reassign or remove other key management personnel.

For investees, whereby such contractual elements are not conclusive because all decisions about the relevant activities are taken on a mutual consent basis, the main deciding feature resides then in the deadlock clause existing in shareholders' agreements. In case a deadlock situation arises at the Board of Directors of an entity, whereby the Board is unable to conclude a decision, the deadlock clause of the shareholders' agreements generally stipulates whether a substantive right is granted to the Company or to all the partners in the entity to buy its shares through a compensation mechanism that is fair enough for the Company or one of the partners to acquire these shares. In case such a substantive right resides with the Company, the entity will be defined under IFRS 10 as controlled by the Company. In case no such substantive right is held by any of the shareholders through the deadlock clause, the entity will be defined as a joint arrangement.

Subsidiaries:

Subsidiaries are all entities over which the group has control. The group controls an entity when the group is exposed to, or has rights to, variable returns from its involvement with the entity and has the ability to affect those returns through its power over the entity. Subsidiaries are consolidated using the full consolidation method.

All reciprocal transactions between two controlled subsidiaries, with no profit or loss impact at consolidation level, are fully eliminated for the preparation of the consolidated financial statements.

Interests in joint arrangements:

The Company has applied IFRS 11 'Joint Arrangements' to all joint arrangements. Under IFRS 11, investments in joint arrangements are classified as either joint operations or joint ventures depending on the contractual rights and obligations of each investor. In determining, under IFRS 11, the classification of a joint arrangement, the Company first assesses whether
